

# The Adventures of Polly and Peter: *Polly Has an Idea!*

---

# Polly Has an Idea!

The sun is here, rise and shine  
Let's get ready, it's morning time!  
"Oh!" said Polly "Feel the heat!"  
"The sun is beating down on the street."

“Wait!” she thought, “Does... that... mean...  
The sun has given heat to wherever it’s been?  
And if it gives us heat and of course light too,  
Then it **MUST** have power for us to use?”

**“I think you’re right!” Peter carried on,  
“They say the *sun* is powerful and strong.**

**Maybe here, they could use some sun,  
To give power to everyone?”**

Another adventure, off they walked,  
To the park when soon they stopped.  
Polly had spotted kites flying high  
Above them in the bright, blue sky.

So she asked:

“What are those?  
How do they work  
and where do they  
go?”

Peter had seen them once before,  
Soaring up above the sea shore.

**“They are called kites and they fly in the sky,  
You hold them with string and watch the clouds go by.  
The wind is what holds them tightly there,  
And makes them blow high above your hair!”**

“What strong wind to carry all of those kites!

to

From cloud

cloud,

left

to

right.

If it carries leaves and other things too,

Then it **MUST** have power for us to use?”

**“I think you’re right!” Peter carried on,  
“They say the *wind* is powerful and strong.**

**Maybe here they could use some wind too,  
To give power to the things they use.”**

So they carried on down through the park,  
Passed the swings and the dogs that bark.  
When soon they saw something large and tall,  
They got closer to find it was a waterfall.

“How amazing! Listen to the sound!

and

onto the river  
ground!

Look at it **WHOOOSH!**

tumbling down so fast

And down at the bottom, the water races past!”

Tree branches jumping through the river,  
Cold splashes on your skin that make you shiver!

Polly thought, “If the water can crash, roar *and*  
smash too,

It must also have power for everyone to use?”

“I think you’re right!” Peter carried on,  
“They say that *water* is powerful and strong.

Maybe here they could use some  
water,  
To give power to things that  
matter.”

On their journey, they spotted 3 ways to make,  
Power that won’t run out for everyday.  
Water, wind and sun, are the three  
That make can make things work for you and me.
